Description of Continuing Education Courses

- CE 5 HUMAN FACTORS IN MEDICAL LIBRARY ADMINISTRATION - Personnel management is studied in terms of interpersonal relationships. Topics covered include: what makes a good supervisor, conflicts in values and expectations which impair staff productivity, and management attitudes which provide for work satisfaction. Using the techniques of case study and psychodrama, administrative problems are discussed, enacted and analyzed by the group. Problems relating to both large and small libraries are examined.
- CE 16 MANAGEMENT OF MEDIA IN LIBRARIES - Media in libraries is explored from a practical point of view providing the librarian with basic knowledge and considerations to enable planning and implementing media programs in support of medical education. Emphasis is given to organization and management, storage and handling, cataloging and indexing, and acquisition.
- CE 18 SYSTEMS ANALYSIS - A new course intended to introduce uninitiated students to the terminology and concepts employed in the use of systems analysis techniques in the medical library setting. The tutorial session will be devoted to group interactions concerning applications of analytic techniques covered by the syllabus.
- CE 23 TEACHING SKILLS FOR LIBRARY EDUCATORS - This is a course for persons with some cataloging and classification experience. Topics to be covered include: International Standards for Bibliographic Description; problems; the use of the Tree Structures and the alphabetical MeSH; cataloging policies; and the future of the NLM and OCLC as sources of cataloging information.
